

Automatic feed valve P1

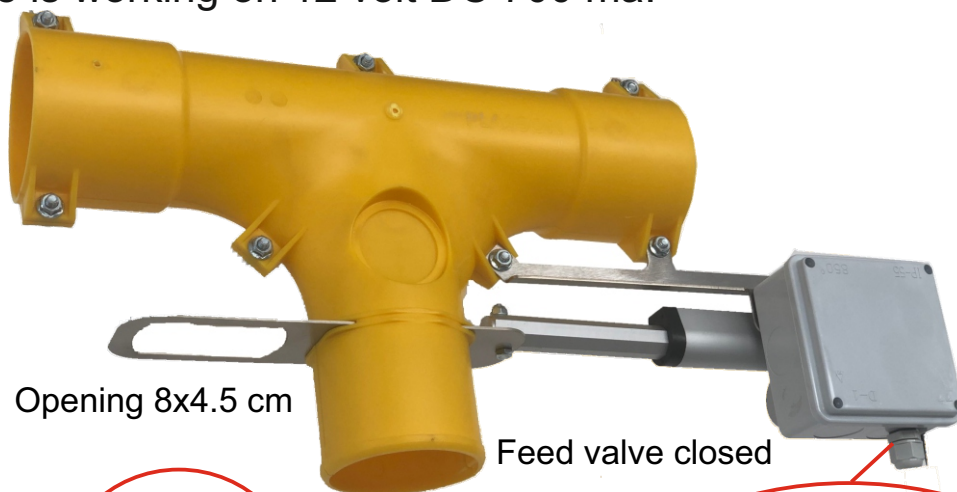

The P1 feed valve is an automatic feed drop valve design for 75/90 mm feed auger pipes.

The P1 feed valve is design in two half parts for easy installation on the pipe. The P1 feed valve can be controlled by any electronic controller by a dry contact.

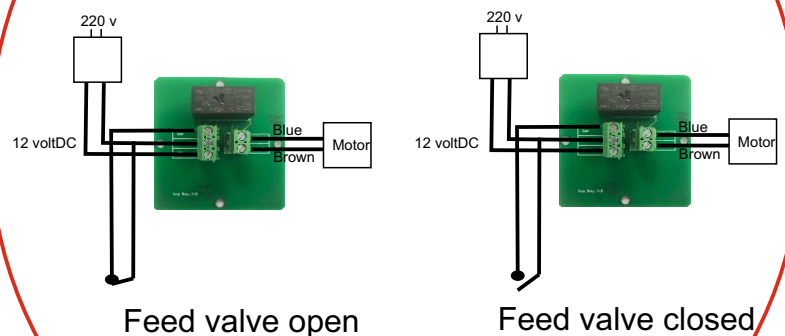

When the input is shorted to + the valve open. When the short is removed the valve will close automatically .

Metal parts are made of stainless steel for long life operation.

The valve is working on 12 volt DC 700 ma.

Feed valve control board

The feed valve will open when input open and +12 volt is shorted
