## The AGM 404 male feed hopper weigher can control up to 4 male feed hopper.

The AGM 404 male feeder hopper weigher is capable of filling as many as 4 feed hoppers, each with varying feed amounts, designed specifically for controlled feeding of breeder males.

The system allows for customization of both the filling duration and the feed volume for each individual hopper.

Utilizing a real-time clock, the AGM 404 manages the male feeder auger line operations.

It also controls the feed valves positioned above each hopper. For accurate weighing, each hopper is suspended from a load cell.

### AGM 404

#### Technical specification

12 V DC volt operation.  
RS 485 for valve operation.  
1 relay NO for auger motor.
